

Pass-Through Cabinets

Description:

Transforma Healthcare offers the solution of a Pass-through Cabinet with a simultaneous automatic interlocking system that will only allow the cabinet doors -on both ends- to be accessed simultaneously.

The Pass-through cabinets are naturally used and located in hospitals, more specifically to serve in operation theaters and operation rooms where it will allow items to be delivered into the operation theater while maintaining the sterile environment.

Transforma has selected to realize the Pass-through Cabinet using Stainless Steel AISI 304 a material that is anti-corrosive and capable of handling the rigorous hygiene detergents.

The cabinet can be produced with a scotch brite fine finishing or any RAL colored antimicrobial powder coating, selected to the preference of the client; a material that is anti-corrosive and capable of handling the rigorous hygiene detergents used to clean the sinks.
